

SPECIFICATION

REFOND P/N

RF-W1SA21IS-N48

Mass Product

en-CSI 100

4.1.5 Directionsfor Use	20
4.1.6 Others	22
4.1.7 Declare	23

1. Description

1.1 General Description

The product is a full-color LED device, Common cathode RGB SMD, High contrast (Surface brush ink technology),The product size: 2.05mmX2.15mmX1.9mm.

LED RGB SMD

2.05mm8871 0 595.32 84294TmW0 BT 7.43(9.4264719US) DAC 0.52532.842.0442/54 12V1hBT6100

Fig.1-6 Glue filling

Notes

All dimensions units are millimeters.

All dimensions tolerances are ± 0.1 mm unless otherwise noted.

1.5 Product Parameters

Table 1-1 Electrical / Optical Characteristics at Ts=25°C

Item	Symbol	Test Condition	Value			Unit
			R	G	B	
Reverse Current	I_R	$V_R=5V$	6	6	6	
Forward Voltage	V_F (min)	R $I_F = 15mA$ G $I_F = 15mA$ B $I_F = 10mA$	1.7	2.7	2.7	V
	V_F (max)		2.4	3.4	3.4	V
Dominant Wavelength	λ_D		617~ 628	520~540	460~475	nm
			5nm per Bin	3nm per Bin	3nm per Bin	
Spectrum Radiation Bandwidth			24	38	30	nm
Luminous Intensity	$I_{V(min)}$		425	735	130	mcd
	$I_{V(avg)}$		680	1250	210	mcd
	$I_{V(max)}$		1100	2125	335	mcd
	BIN Range		1:1.3	1:1.3	1:1.3	
Viewing Angle	1/2			110		

Table 1-2 Absolute Maximum Ratings at Ts=25°C

Parameter	Symbol	Absolute Maximum Ratings			Unit
		R	G	B	
Forward Current	I_F	20	15	15	mA
Reverse Voltage	V_R	5	5	5	V
Operating Temperature	T_{OPR}	-30 ~ +85			
Storage Temperature	T_{STQ}	-40 ~ +100			
Power Dissipation	P_D	48	51	51	mW
Junction Temperature	T_J	100	100	100	
Electrostatic Discharge (HBM)	E_{SD}	1000V			

Notes

1. The above forward voltage measurement allowance tolerance is $\pm 0.1V$.
2. The above Tolerance of measurement of dominant wavelength $\pm 1nm$.
3. The above luminous intensity measurement allowance tolerance $\pm 10\%$.
4. Care is to be taken that power dissipation does not exceed the absolute maximum rating of the product.
5. All measurements were made under the standardized environment of Refond.
6. Luminous intensity range is for reference only,specific parameters please refer to the label.

2.4 Reliability Test Items And Conditions

Table 2-3 Reliability Condition

Test Items	Ref.Standard	Test Condition	Time	Quantity	Ac/Re /
Resistance to Soldering Heat	JESD22-B106	Temp:250 max T=10 sec	3times	22pcs.	0/1
Thermal Shock	JEITAED-4701 300 307	-40 15min 10s 100 15min	500cycle	22pcs.	0/1
Moisture Resistance	IPC/JEDEC J-STD-020D.1	1. Moisture Absorption Ta=85 / RH=85%/12HR 2. Tsol=250 , T=10s Reflow Soldering	3times	22pcs.	0/1
High Temperature Storage	JEITAED-4701 200 201	Temp:100	1000hrs.	22pcs.	0/1

Notes

The Reliability tests are based on Refond existing test platform.

2.The above reliability tests is based on the verification of a single/strip LED of Refond's existing experimental platform,the reliability experiment was taken under good heat dissipation conditions. when customers applies the LED to the series and parallel circuit,should take consideration of all the factors such as the current, voltage distribution, heat dissipation and others.

3. SMT Reflow Soldering Instructions SMT

3.1 SMT Reflow Soldering Instructions SMT

Fig.3-1 Profile

Table 3-1 Description

Average temperature rise speed	T_{smax} T_P	Max 4 °C/ s	4 °C/
Preheating: minimum temperature	(T_{smin})	150 °C	
Preheating: Max temperature	(T_{smax})	200 °C	
Preheating: Time	T_{smin} T_{smax}	60s-120s	60 - 120
Time limited to maintain high temperature: the temperature	(T_L)	217 °C	
Time limited to maintain high temperature: The Time	(t_L)	Max 60s	60
Peak /Classification of temperature:	/ (T_P)	245 °C	
Time limit classification of peak temperature time	t_p	Max 10s	10
Hold time within 5 °C with the actual peak temperature (T_P)	(T_P) 5 °C	Max 30s	30
Cooling speed		Max 6 °C/ s	6 °C/
Needed time from 25 °C to T_p	25 °C	Max 8 minutes	8

Notes

- 1.Reflow soldering should not be done more than one times.
- 2.It is recommended that use the middle temperature solder paste.
- 3.Stress on the LEDES should be avoided during heating in soldering process.
- 4.After soldering ,do not deal with the product before its temperature drop down to room temperature.
5. Nitrogen reflow soldering is recommended. Air flow soldering conditions can cause optical degradation,

caused by heat or atmosphere.

6. This product can differ in optical characteristics depending on the number of reflow cycles. In a single display, only LEDs with same number of reflow cycles should be used regardless of the application type, such as rental and/or permanent installations.

7. This LED is designed to be reflow soldered on to a PCB. If dip soldered, cannot guarantee its reliability.

3.1.1 Soldering Iron

(1) When hand soldering, keep the temperature of iron below less 300 less than 3 seconds

(2) The hand solder should be done only one time.

3.1.2 Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed in advance whether the characteristics of LEDs will or will not be damaged by repairing.

LED

3.1.3 Cleaning

The LEDs should not be cleaned with water, benzene, and/or thinner.

4.Handling Precautions

4.1Handling Precautions

4.1.1 Storage

(1) Moisture proof and anti-electrostatic package with moisture absorbent material is used, Suggest storage time is less than 6 months.

(2) Storage condition: temperature $\leq 30^{\circ}\text{C}$, humidity $\leq 60\% \text{ RH}$.

(3) Before opening the package, please check the package for air leaks, if there exists any air leaks, please return the product to our company for package after dehumidification by baking before your second use.

(4) After the package is opened, the product must be used in the specified environment of temperature below 30°C /humidity below 60% RH, and soldered within 12HR. Unused material must be stored in the environment of temperature below 30°C /humidity below 10% RH , These surplus products should be baked $65\pm 5^{\circ}\text{C}/24\text{H}$ before next use.

12 :30 :10%RH
 :65 5 /24H

(5) Before SMT, LEDs need to be baked , baking requirement as below :

Customer pre-treatment conditions before use				
Condition before use	undamped Production date 2 months 2	undamped Production date 2-6 months 2-6	undamped Production date 6-12 months 6-12	damped or Production date exceed 12 months 12
Pre-treatment	Baked 65 5 /12H 65 5 /12H	Baked 65 5 /24H 65 5 /24H	Baked 65 5 /48H 65 5 /48H	Return to the original factory for processing

4.1.2 Static Electricity

Static electricity and surge voltage damage the LEDs. Damaged LEDs will show some unusual characteristics such as the forward voltage becomes lower, or the LEDs do not light at the low current and even not light. All devices, equipment and machinery must be properly grounded. At the same time, it is also recommended that anti-electrostatic wrist bands, pads, uniforms, gloves or containers can be used as effective measures when dealing with the LEDs.

4.1.3 Reverse voltage protection

In generally the reverse current of LED is very small, it can't effect using the component normally, but when it often suffered the reverse voltage which exceed the limits of the component than it will be damaged, the reverse current increases rapidly causing the string light display gray scale so when designing, please pay attention to control the reverse voltage we suggest the reverse voltage less than 5V.

LED , LED , LED 5V.

4.1.4 The safe temperature for LEDs working

(1) Luminous Intensity decreased radically, if LEDs worked in hot environment for a long time, they will be disabled easily. When LEDs are working in surface temperature should be lower than 55 and the temperature should be lower than 75 .

LED , , , , , .
 , , 55 , 75 .

(2) Proper thermal management is an important when designing products with LEDs. LED die temperature is affected by PCB thermal resistance and LED spacing on the board. Please design products in a way that the LED die temperature does not exceed the maximum junction temperature (T_J).

(3) Drive current should be determined for the surrounding ambient temperature (T_A) to dissipate the heat form the product.

T_A

4.1.5 Directionsfor Use

(1) Duringdesigning a circuit, the current goes through each LED chipmust not exceed the Absolute Max Rating current specified for each chip.

LED

(2) It is recommended that each LED chipis driven bya constant current.

LED

(3) When having the two or more dices within this product at the same time, the total power dissipation for the LED package must be within the max value specified in this specification.

LED

(4) This product should be operated with forward current. Make sure the product is not subjected

continuous reverse voltage because it may cause damage to theLED chip. If the display will not be

used for a long time, the main power should be switched off, Dehumidification is necessary before using the screen again.

LED

(5) Make sure that the reverse voltage will not exceed the Absolute MaxRating when using the LEDs with matrix drive. Ensure that excessive voltages such as lightning surges are not applied to the LEDs.

LED

LED

(6) Aging is recommended in order to detect manufacturing and assembly defects. Particularly, make sure that excessive current and/or voltage is not applied to the LEDs. This aging should be conducted in environments where water condensation does not occur.

LED

(7) when the LEDs are used in the following environments, incorporate sufficient measures into the display to prevent debris, water/moisture and gases that will adversely affect the product.

- where water vapor is abundant
- where water condensation is likely to occur
- where water is likely to splash onto the LEDs

-

(8) In areas where hydrogen sulfide, which is a sulfide-based gas, is present (e.g. hot springs and volcanic areas), and where salt is abundant (e.g. coastal areas), the life may be shortened.

(9) When power

100% wattage for the LEDs may have absorbed moisture. Before normal use of this display, operate the display at approximately 20% wattage for an initial time period.

LED	100
20	

(10) If the display units will be rented, those units should be selected carefully to ensure that the display as a whole will appear the same color and brightness.

(11) If the display modules are loaded onto and/or transported by ship, the moisture environment on the vessel can cause condensation; the display units should be packaged to prevent moisture absorption.

(12) If a display that has been, or is being, used is relocated, it is possible that degradation of the LED has occurred. When transporting this display, provide sufficient protection for the LEDs in addition to the moisture-proof packaging for the display. When this display is reinstalled, ensure to follow the installation instructions for environments and use.

	LED
LED	

4.1.6 Others

(1) Do not directly touch or handle the epoxy surface. It may damage the internal circuitry. Handle the component along the side surfaces by using forceps or appropriate tools.

(2) Do not handle the LEDs with bare hands as it will contaminate the LED surface and may affect the optical characteristics: it might cause the LED to be deformed and/or the wire to break, which will cause the LED not to illuminate. The lead could also cause an injury.

LED LED LED
 LED

(3) Do not stack assembled PCBs together. Otherwise, it may cause damage to the resin (e.g. cut, scratch, chip, crack, delamination and deformation) and the wire to break causing a catastrophic failure (i.e. the LED not to illuminate).

PCB
 LED

(4) Other precautions, please refer to our "Ruifeng Photoelectric Full color SMD LED device User Manual".

SMD LED

4.1.7 Declare

(1) This specification is written both in English and in Chinese and the latter is formal.

(2) Both the customers and Refond will agree on official specifications of supplied products before

reserves the right to further modify the specification for technical reference and sample without noticing the customers.
